

How to find Importing Brushes in the Help Files

PSP versions 8 – X4

Usually the most difficult things about using the help files are determining the expressions used by the creators of the help file, and remembering it is there. Since most beginner users haven't an earthly clue what exact words they need to use, I thought it would be handy to have a small reference for how to get help with importing brushes.

Versions X through X4:

In the Menu, click on Help. Then click on Help Topics.

From there, Working With Brushes > Importing and Sharing Brush Tips > and finally To Import a Custom Brush.

Version 9:

In the Menu, click on Help. Then click on Help Topics.

From there, Importing > Custom Brush Tips (where you scroll to the bottom to find) > To Import a Custom Brush.

Version 8:

From menu, click on Help. Then click on Help Topics.

From there, Contents > Creating Brush Tips (scroll down to find) > To Import Custom Brushes.

Hope this helps;O)
